Next Question

Which type of variables in automation 360 return specific values about the device on which the bot executes?

A bot developer has created a bot that reads the data from an Excel workbook without opening it. Which loop iterator should the bot developer use to read each row at a time?

Which of the following actions should the bot developer use to extract table from web page?

Which of the following actions should the bot developer use to extract table from web page?

- Excel Advance: Write from DataTable
- Database: Export to DataTable
- Recorder: Capture
- DataTable: Write to file

To extract a table from a web page, the bot developer should use the Recorder: Capture action. This action allows the bot to capture the table data from the web page and store it in a DataTable.

Hope that help! Let me know if you have any other questions.

In which phase of the RPA Development lifecycle is the process design document (PDD) created?

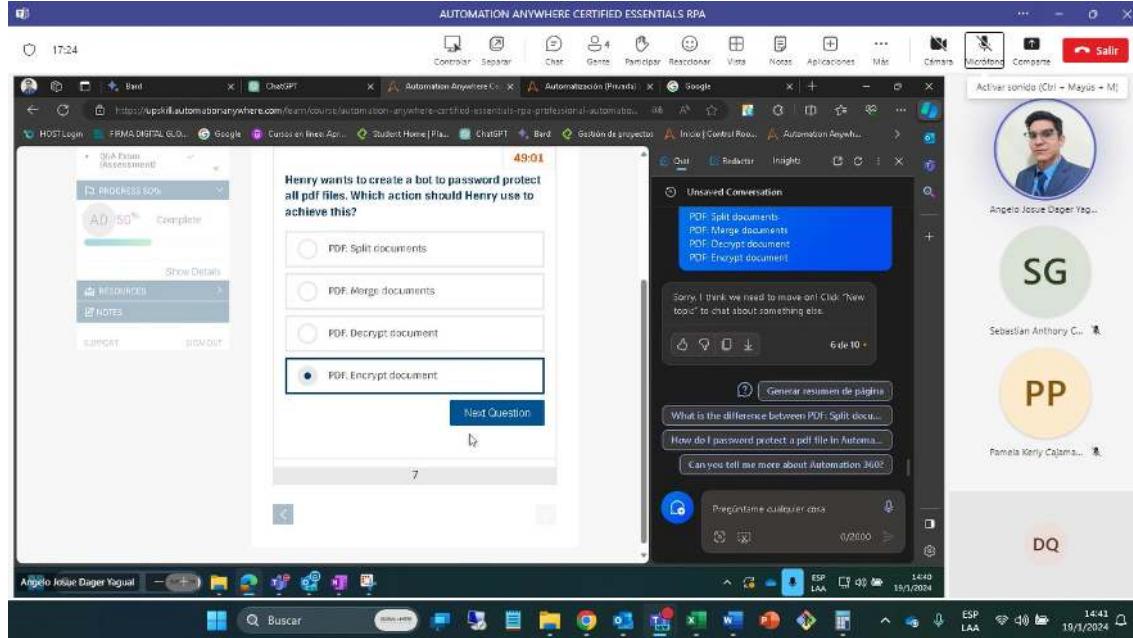

In which phase of the RPA Development Lifecycle is the Process Design Document (PDD) created?

- Development
- Discovery
- Design
- Deployment
- Testing

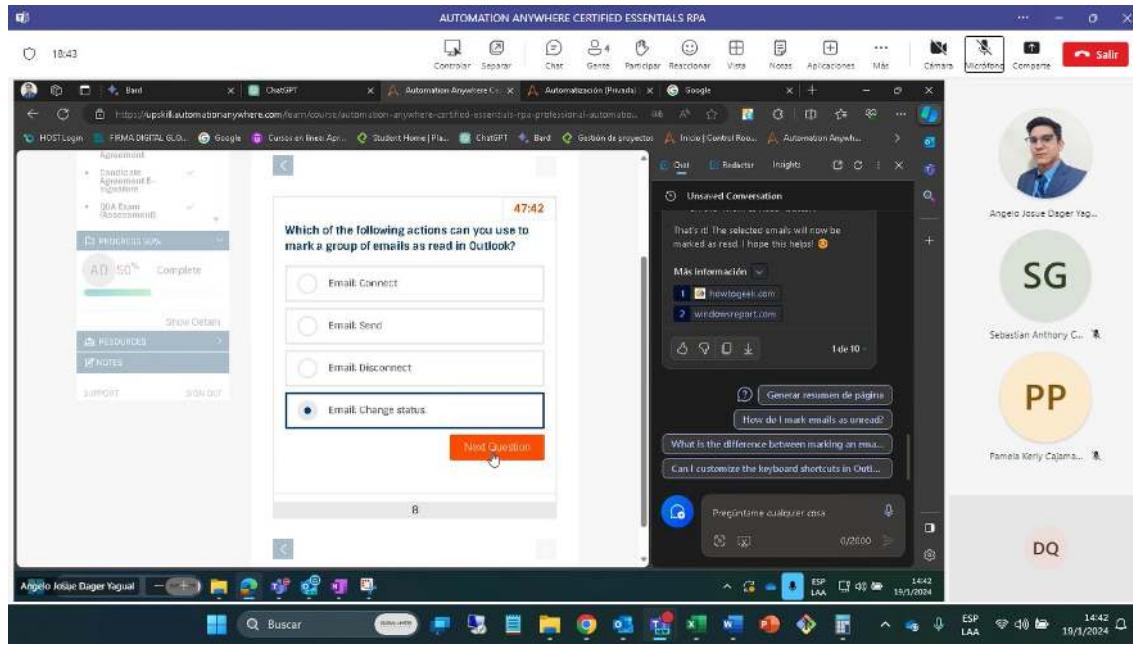

The Process Design Document (PDD) is created in the Design phase of the RPA Development Lifecycle. The PDD is the first document in the Design phase, that is created once you have a process understood with the SMEs or the process experts. It defines all the processes that will be automated and can bring efficiency to the whole process.

Hope that help! Let me know if you have any other questions.

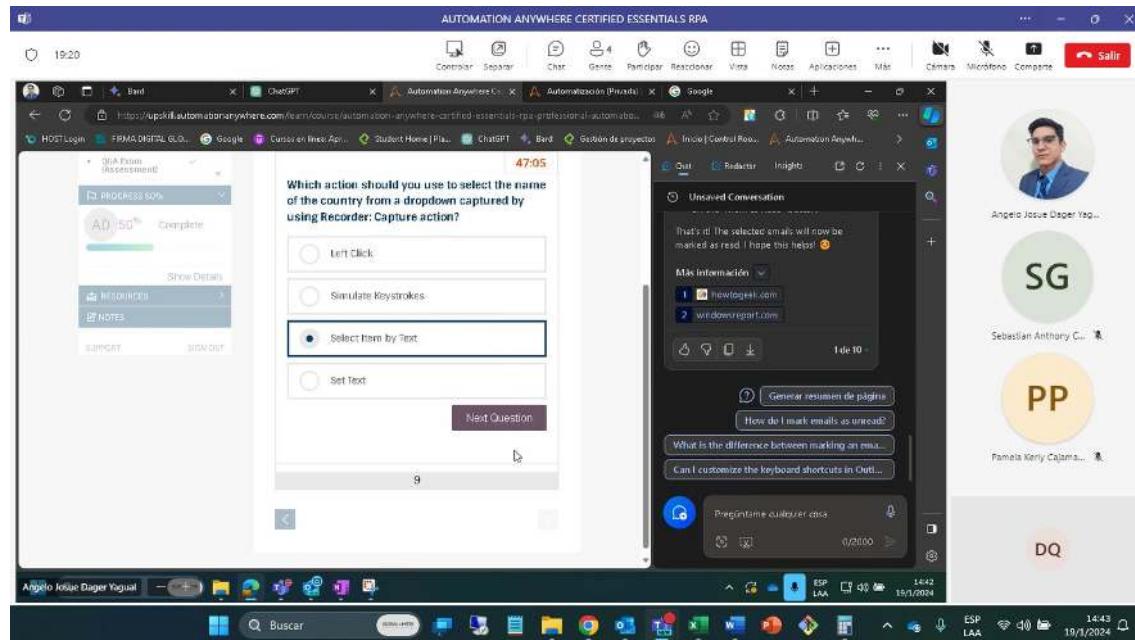

Henry wants to create a bot to password protect all pdf files. Which action should Henry use to archive this?

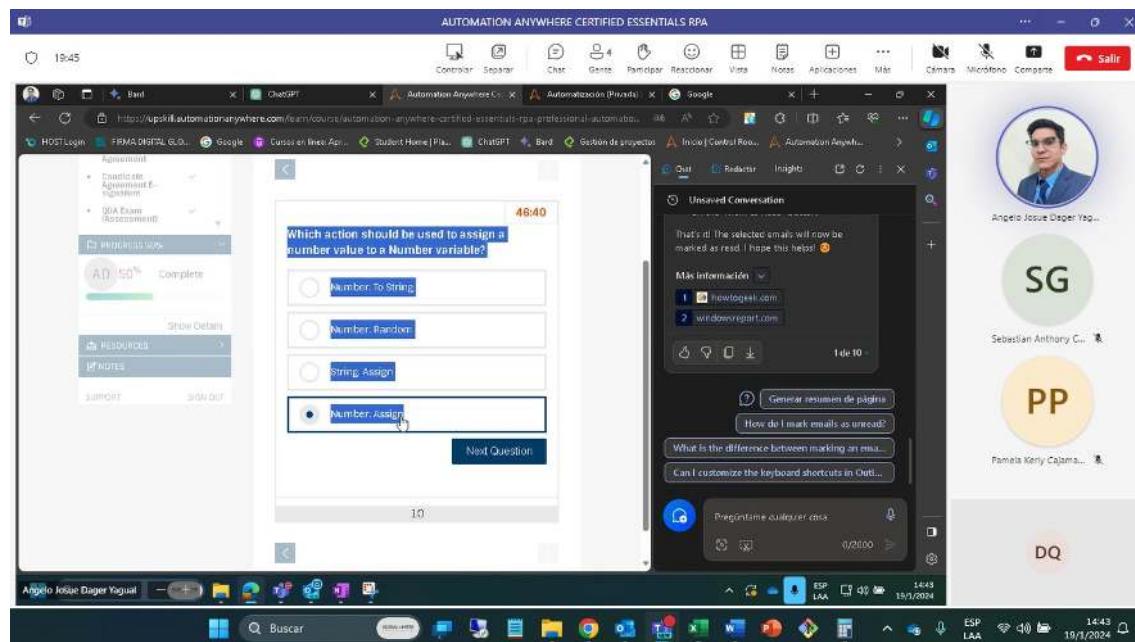

Which of the following actions can you use to mark a group of emails as read in Outlook?

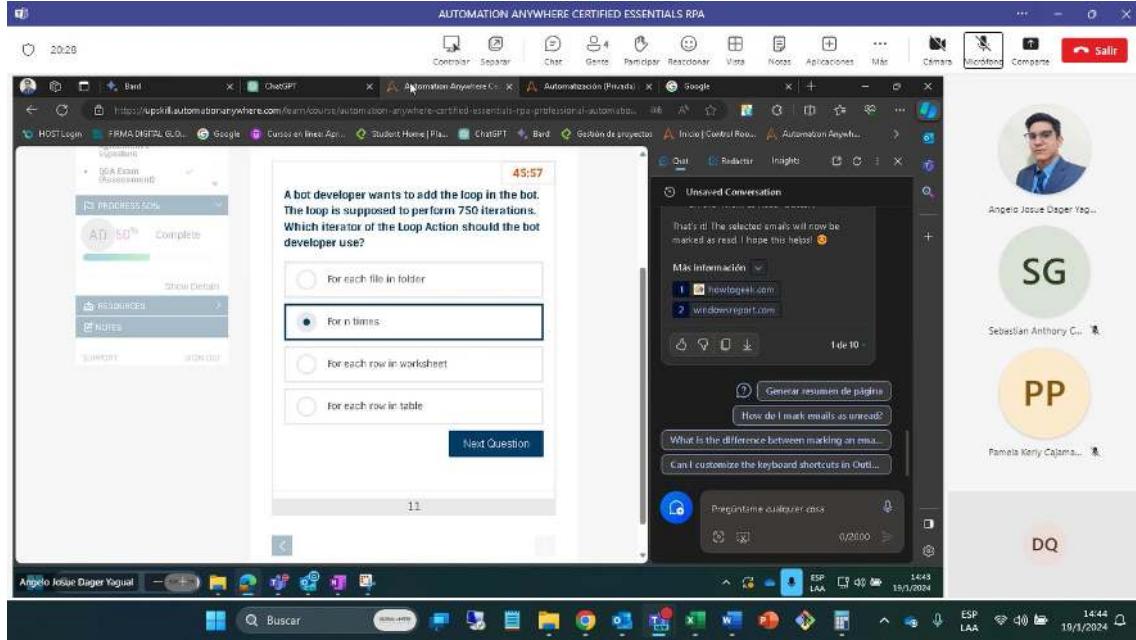

Which action should you use to select the name of the country from a dropdown capture by using recorder: Capture action?

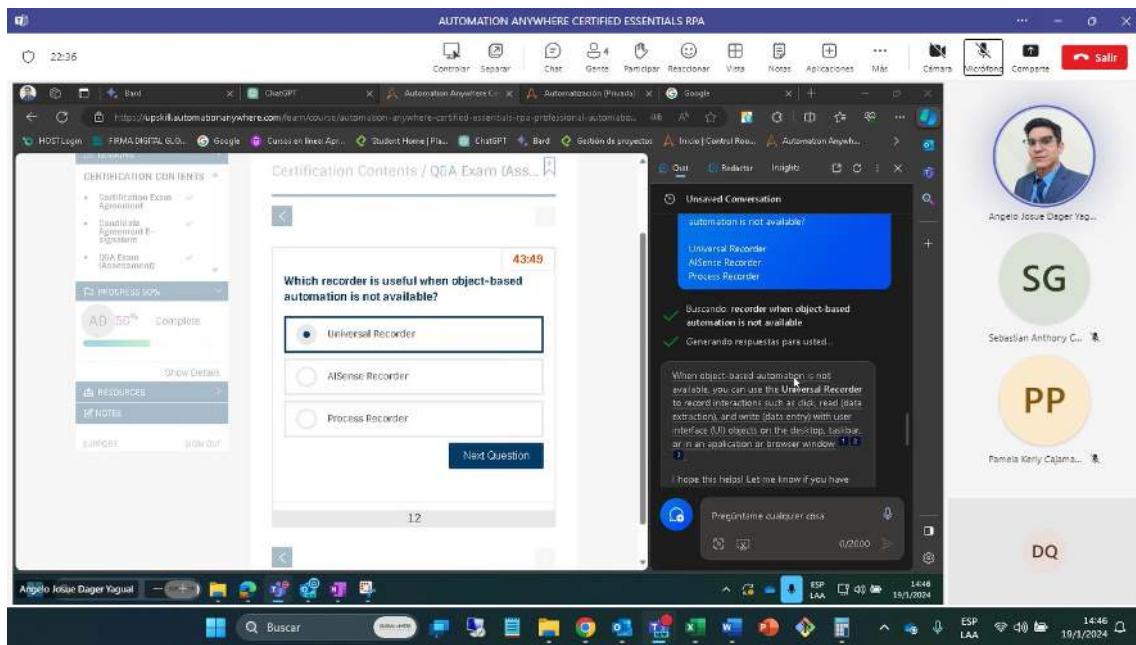

Which action should be used to assign a number value to a number variable?

A bot developer wants to add the loop in the bot. The loop is supposed to perform 750 iterations. Which iterator of the Loop Action Should the bot developer use?

Which recorder is useful when object-based automation is not available?

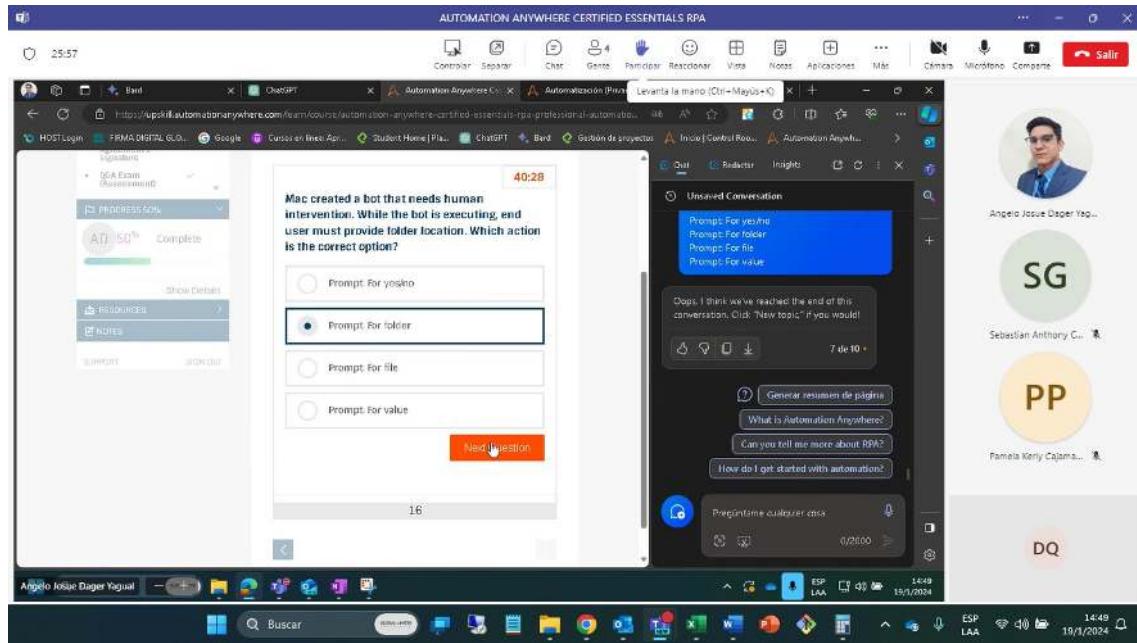

Which of the following feature from the control room decides if the user is a bot Runner or Bot Creator?

The screenshot shows a computer desktop with the "AUTOMATION ANYWHERE CERTIFIED ESSENTIALS RPA" application open. A question card in the center asks: "Which of the following feature from the Control Room decides if the user is a Bot Runner or Bot Creator?". The options are: License, Roles, Activity, and Devices. The "Roles" option is selected. To the right of the question is a sidebar with a conversation log and user profiles for Angelo, Sebastian, Pamela, and DQ. The system status bar at the bottom shows battery level, signal strength, and date/time.

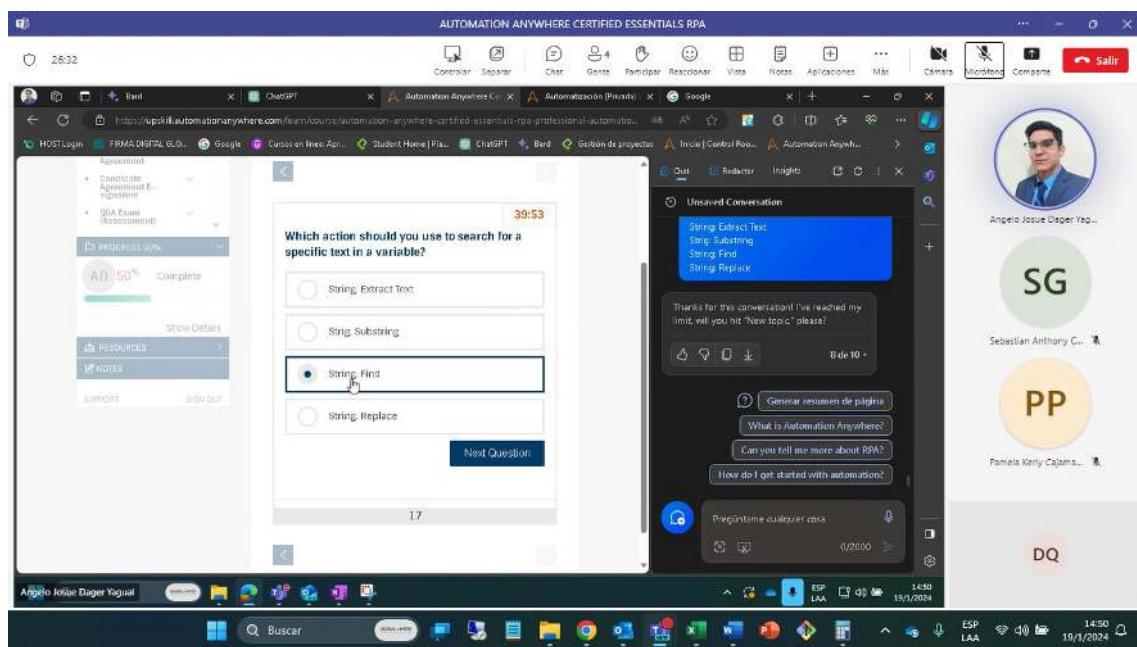

Which document contains the information about the process workflow of the process that has been identified for automation?

The screenshot shows the same software interface. A new question card asks: "Which document contains the information about the process workflow of the process that has been identified for automation?". The options are: Complexity Matrix, Solution Design Document (ISOD), Feasibility Matrix, and Process Design Document (POD). The "Process Design Document (POD)" option is selected. The sidebar and system status bar are identical to the previous screenshot.

Mac created a bot that needs human intervention. While the bot is executing end user must provide folder location. Which action is the correct option?

Which action should you use to search for a specific text in a variable?

Which of these packages enables you to run a sequence of actions repeatedly for a specific number of times?

A screenshot of a Windows desktop showing a web browser window for 'AUTOMATION ANYWHERE CERTIFIED ESSENTIALS RPA'. The question on the screen is: 'Which of these packages enables you to run a sequence of actions repeatedly for a specific number of times?'. The options are: Loop package (selected), Trigger loop package, Wait package, and If package. A timer at the top right shows 39:03. On the right side of the screen, there are four user profiles with initials SG, PP, and DQ visible.

How do you load and manage action packages in Automation 360?

A screenshot of a Windows desktop showing a web browser window for 'AUTOMATION ANYWHERE CERTIFIED ESSENTIALS RPA'. The question on the screen is: 'How do you load and manage action packages in Automation 360?'. The options are: Packages can only be loaded during the installation of Automation 360, From the Administration > Settings menu in the Control Room, and From the Manage > Packages menu in the Control Room (selected). A timer at the top right shows 38:09. On the right side of the screen, there are four user profiles with initials SG, PP, and DQ visible.

Which is the first action you should use while working with a Database?

The screenshot shows a computer desktop with the Automation Anywhere Certified Essentials RPA application open. A question card is displayed in the center:

Which is the first action you should use while working with a Database?

Database Connect

Database Disconnect

Database Begin Database Transaction

Database Read from

A progress bar at the bottom of the card indicates 20% completion. To the right, there are three user profiles: Angelo Josue Dager Yagual (SG), Sebastian Anthony C., and Pamela Kery Cajama (DQ). The system status bar at the bottom shows the date as 19/3/2024.

Which of the following packages/actions can a bot developer use to accept user input the bot during runtime?

The screenshot shows the same Automation Anywhere application window. A new question card is displayed:

Which of the following packages/actions can a bot developer use to accept user input into the bot during runtime?

Comment

Interactive Forms

Prompt

Message Box

A progress bar at the bottom of the card indicates 21% completion. The same three user profiles (SG, Sebastian Anthony C., DQ) are visible on the right. The system status bar at the bottom shows the date as 19/3/2024.

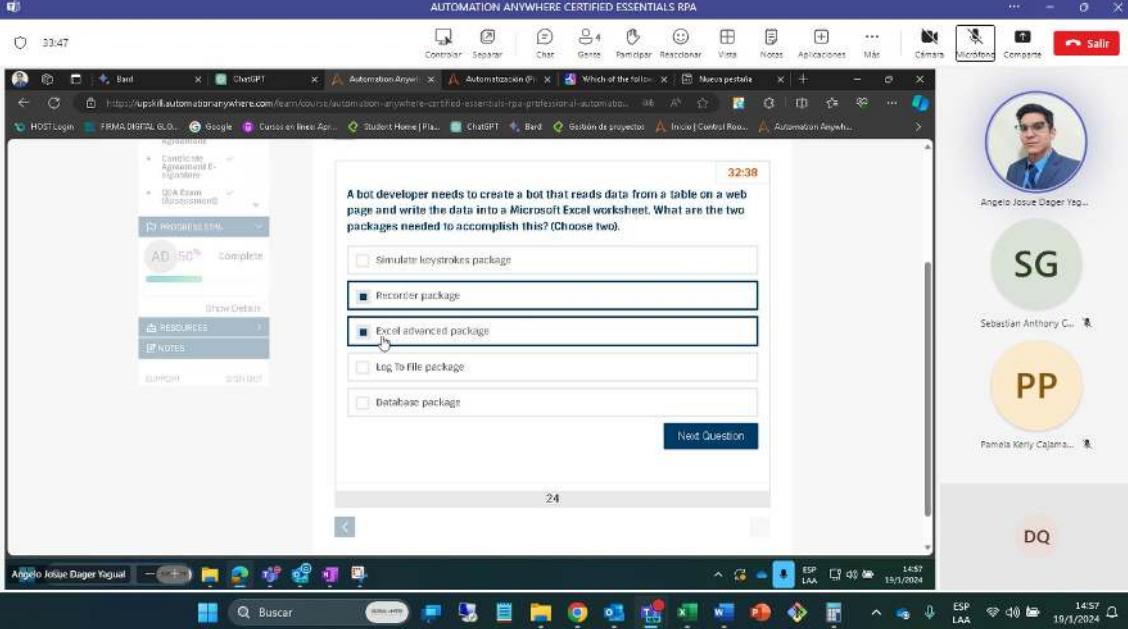

Which action should you use to write data into database table?

The screenshot shows a computer desktop with the Automation Anywhere Certified Essentials RPA software open. The main window displays a question: "Which action should you use to write data into database table?". The options listed are: Database: Read From, Database: Export to data table, Database: Insert/Update/Delete (which is selected), and Database: Connect. The background shows a sidebar with course navigation, a progress bar at 50%, and a sidebar with various resources and notes. On the right side, there are circular icons for users: Angelo Josue Dager Yagual (SG), Sebastian Anthony C... (PP), and Pamela Kerly Cajama... (DQ). The taskbar at the bottom shows several pinned applications and the system clock.

Which action should you use to enter text in a textbox captured by using Recorder: Capture actions?

The screenshot shows the same software interface as the previous one. The question now is: "Which action should you use to enter text in a Textbox captured by using Recorder: Capture action?". The options listed are: Simulate Keystrokes, Click, Left Click, and Set Text (which is selected). The background and user interface elements remain consistent with the first screenshot.

A bot developer needs to create a bot that reads data from a table on a verb page and write the data into a Microsoft excel worksheet. What are the two packages needed to accomplish this? (Choose two).

A bot developer needs to create a bot that reads data from a table on a web page and write the data into a Microsoft Excel worksheet. What are the two packages needed to accomplish this? (Choose two).

Simulate keystrokes package

Reconicer package

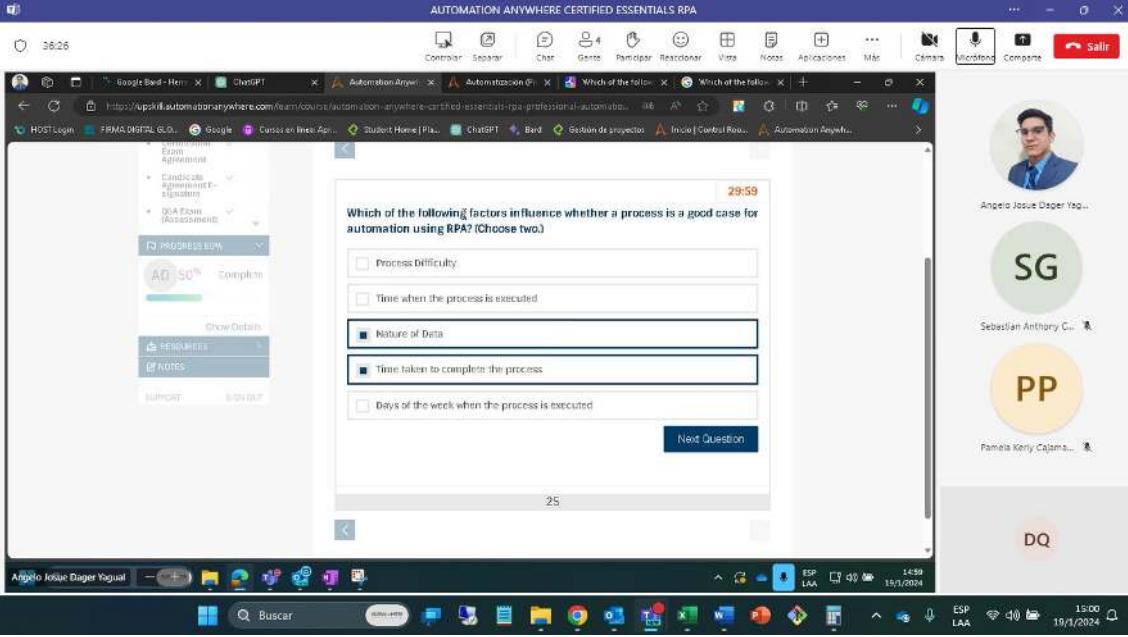

Excel advanced package

Log To file package

Database package

Next Question

Which of the following factors influence whether a process is a good case for automation using RPA? (Choose two).

Which of the following factors influence whether a process is a good case for automation using RPA? (Choose two)

Process Difficulty

Time when the process is executed

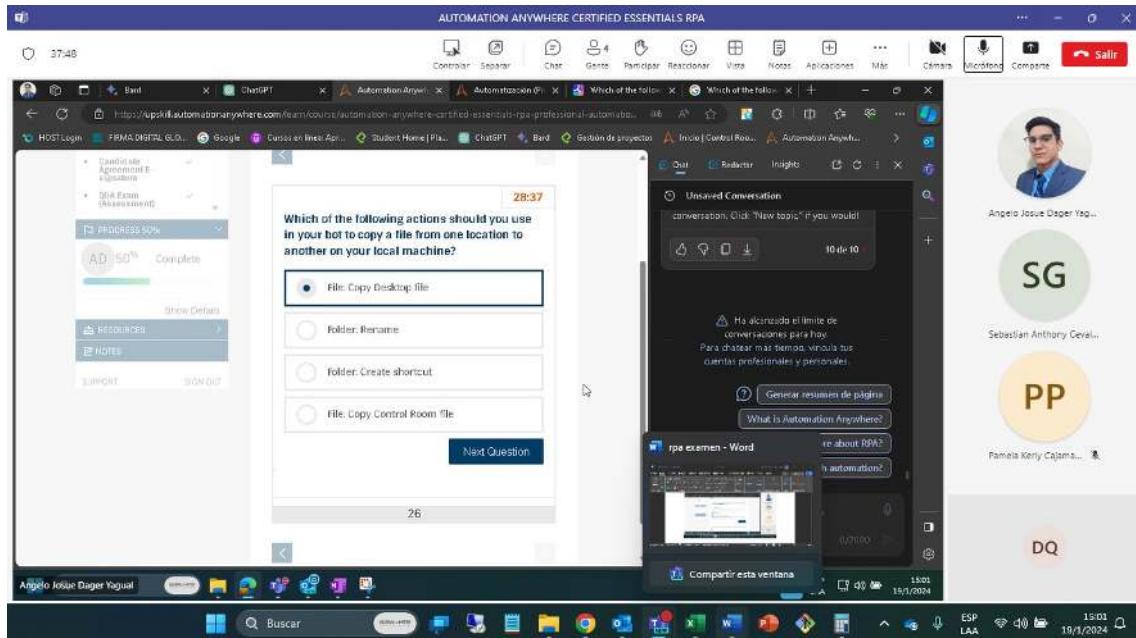

Nature of Data

Time taken to complete the process

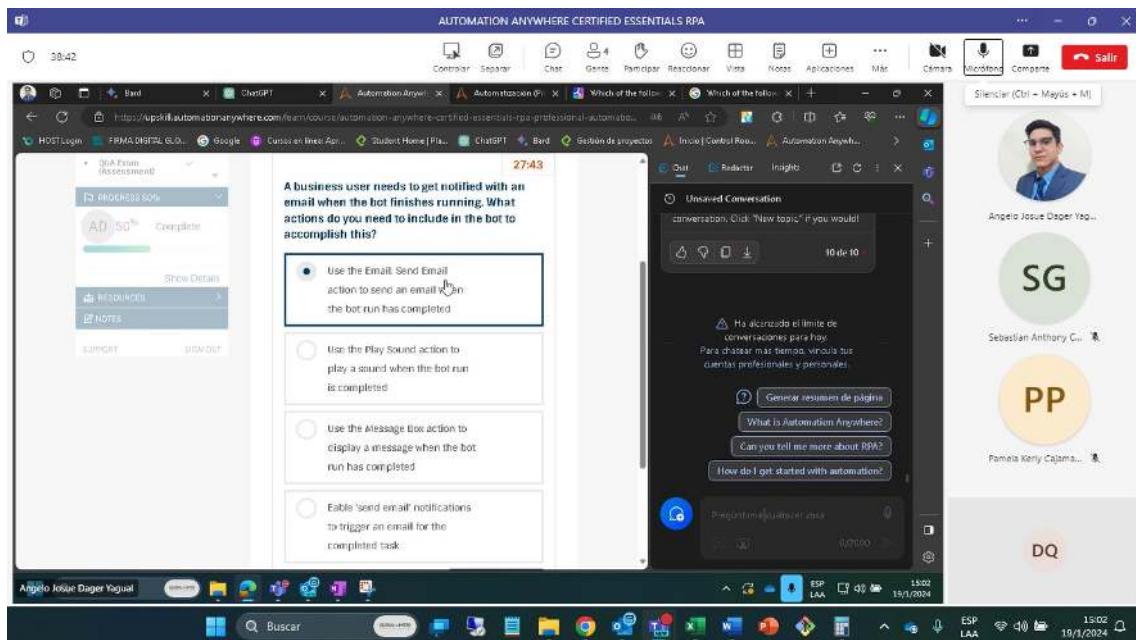

Days of the week when the process is executed

Next Question

Which of the following actions should you use in your bot to copy a file from one location to another on your local machine?

A business user needs to get notified with an email when the bot finishes running.

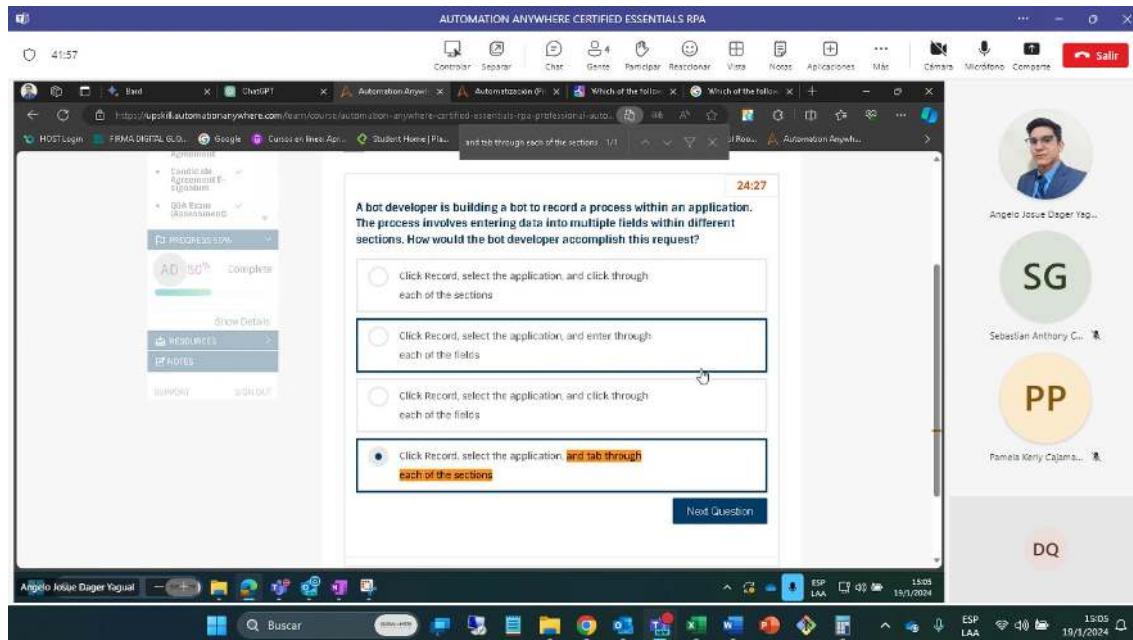

Which component is a lightweight application that enables you to run bots on your device by connecting a local machine to the Automation 360 control room?

The screenshot shows the Automation Anywhere Certified Essentials RPA software interface. A question card is displayed in the center: "Which component is a lightweight application that enables you to run bots on your device by connecting a local machine to the Automation 360 control room?". The options are: Metabot, Bot Agent (selected), Task Bot, and IQ Bot. Below the options is a "Next Question" button. To the right of the question card is a sidebar titled "Unsaved Conversation" with a message from "Angelo Josue Dager Yagu...". On the far right, there are three circular icons labeled SG, PP, and DQ, each associated with a name: Sebastian Anthony C..., Pamela Kelly Cajama..., and Daniel Quesada... respectively. The system status bar at the bottom shows "15:02 19/1/2024".

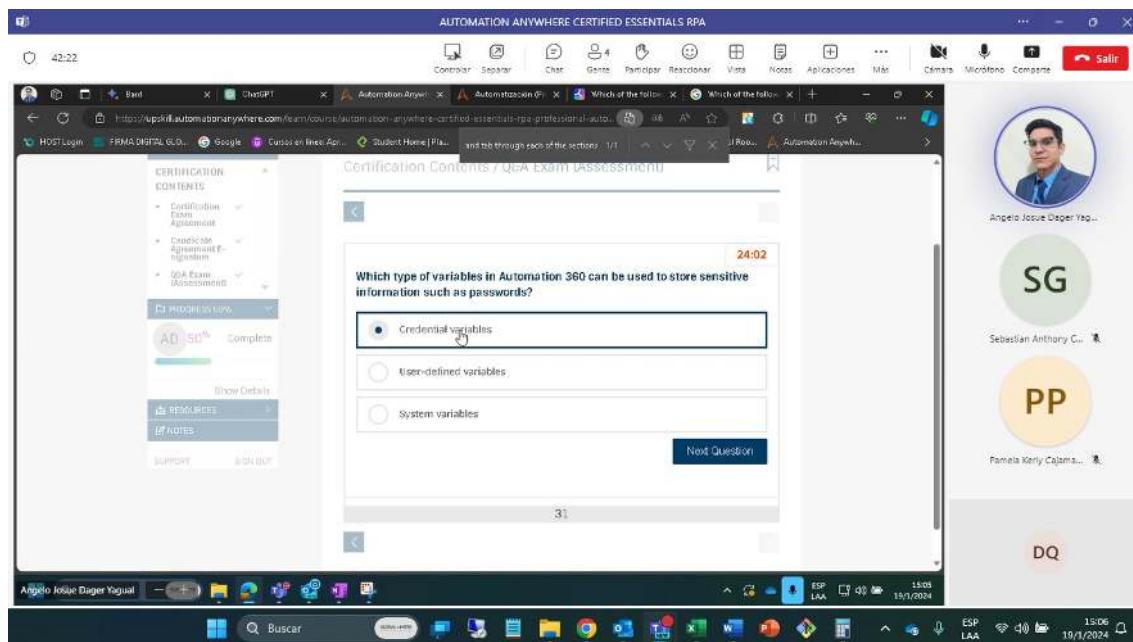

The loop iterator “For each file in folder” returns the output in dictionary variable.

The screenshot shows the Automation Anywhere Certified Essentials RPA software interface. A question card is displayed in the center: "The Loop iterator “For each file in folder” returns the output in dictionary variable. What are the key names stored in dictionary variable?". The options are: Filename and extension, name and extension (selected), Filename and Filenextension, and Filepath and Extension. Below the options is a "Next Question" button. To the right of the question card is a sidebar titled "Unsaved Conversation" with a message from "Angelo Josue Dager Yagu...". On the far right, there are three circular icons labeled SG, PP, and DQ, each associated with a name: Sebastian Anthony C..., Pamela Kelly Cajama..., and Daniel Quesada... respectively. The system status bar at the bottom shows "15:03 19/1/2024".

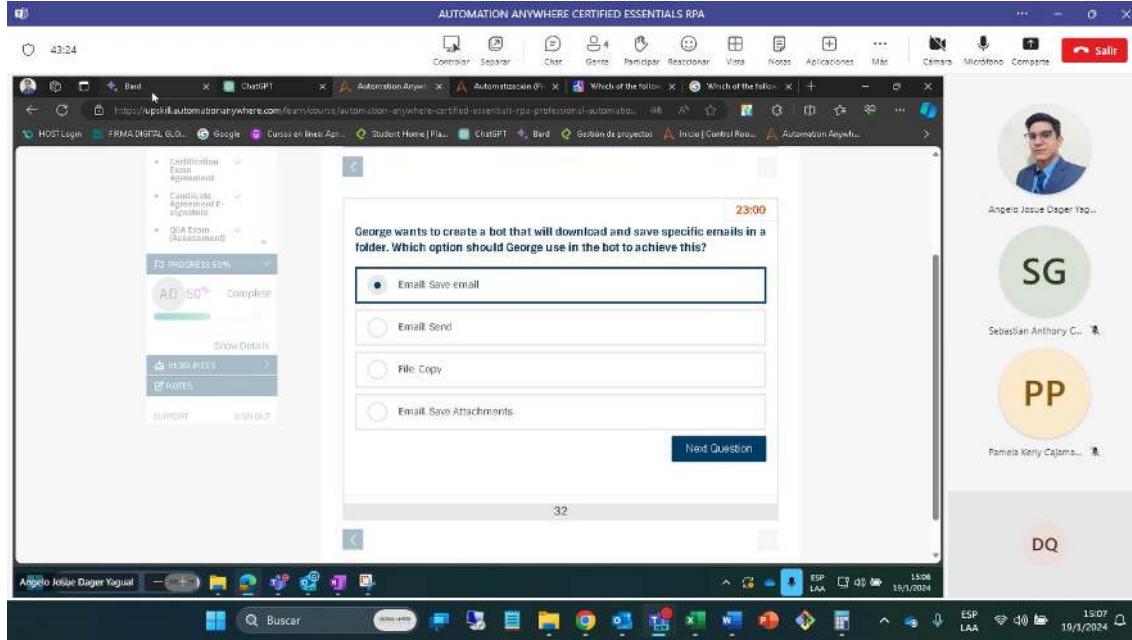

A bot developer is building a bot to record a process within an application.

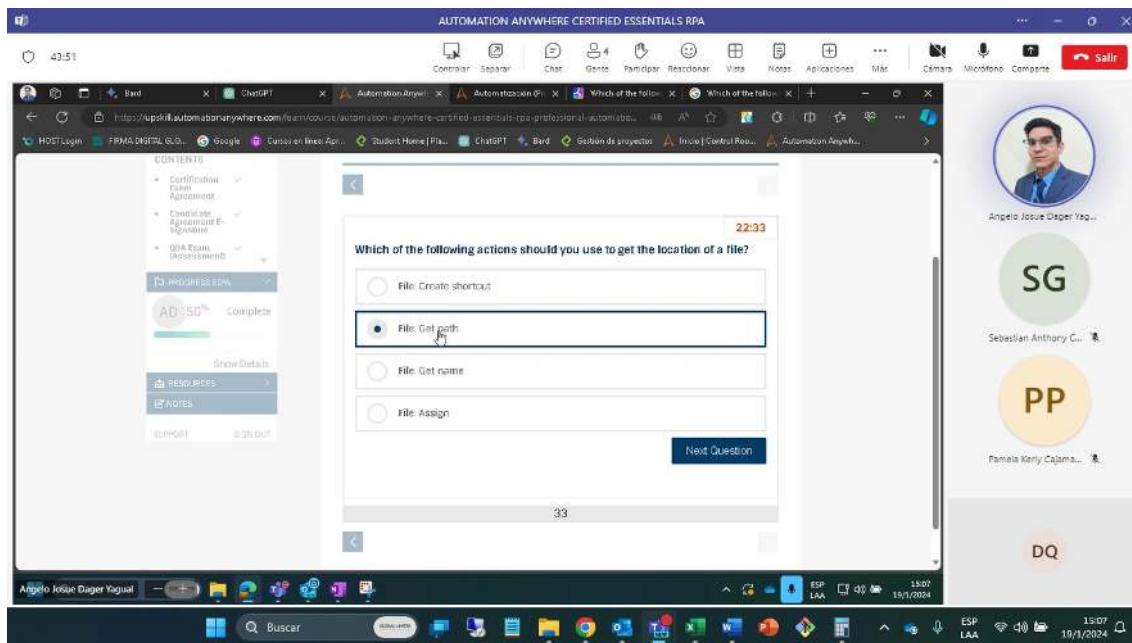

Which type of variables in automation 360 can be used to store sensitive information such as passwords?

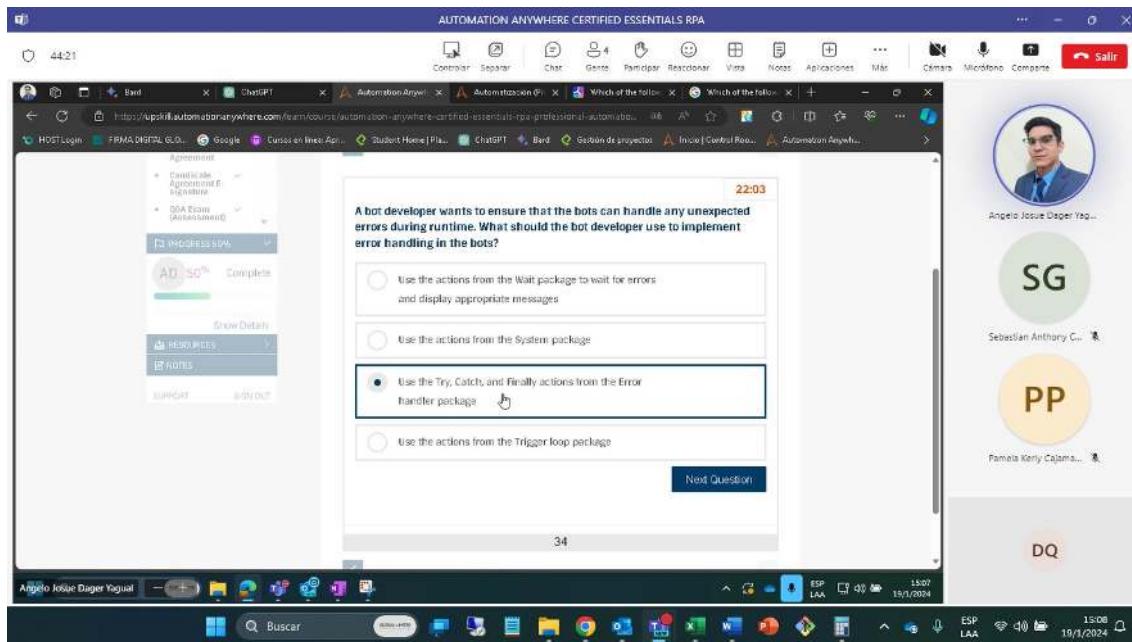

George wants to create a bot that will download and save specific email in a folder. Which option should George use in the bot to achieve this?

Which of the following actions should you use to get the location of a file?

A bot developer wants to ensure that the bots can handle any unexpected errors during runtime. What should the bot developer use to implement error handling in the bots?

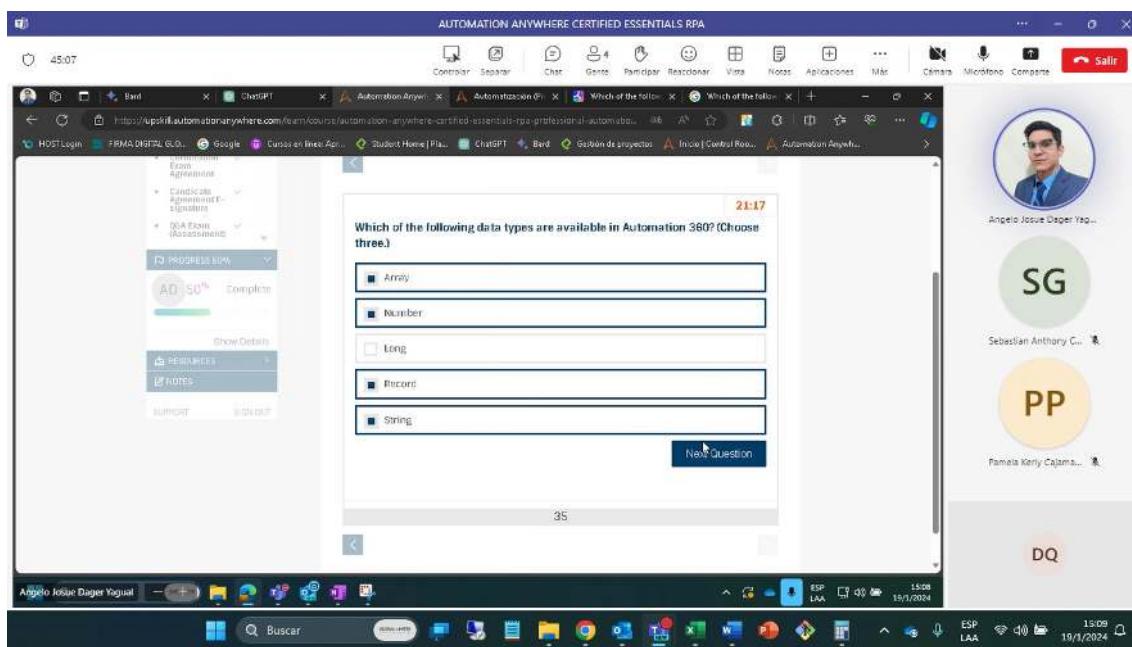

The screenshot shows a Windows desktop environment with a browser window open to a course page. The main content area displays a question: "A bot developer wants to ensure that the bots can handle any unexpected errors during runtime. What should the bot developer use to implement error handling in the bots?". Four options are listed:

- Use the actions from the Wait package to wait for errors and display appropriate messages
- Use the actions from the System package
- Use the Try, Catch, and Finally actions from the Error Handler package
- Use the actions from the Trigger loop package

The correct answer, "Use the Try, Catch, and Finally actions from the Error Handler package", is highlighted with a blue border. Below the options is a "Next Question" button. The status bar at the bottom indicates the question number is 34.

Which of the following data types are available in Automation 360? (Choose three.)

The screenshot shows a Windows desktop environment with a browser window open to a course page. The main content area displays a question: "Which of the following data types are available in Automation 360? (Choose three.)". Five options are listed:

- Array
- Number
- Long
- Record
- String

The first two options, "Array" and "Number", are checked. Below the options is a "Next Question" button. The status bar at the bottom indicates the question number is 35.

Which feature in automation 360 can you use to securely store and pass sensitive information such as passwords and account numbers while building bot?

The screenshot shows a Windows desktop environment with the Automation Anywhere Certified Essentials RPA application open. The taskbar at the bottom displays various icons, including Microsoft Office applications, a browser, and system status indicators. The main window of the application has a title bar "AUTOMATION ANYWHERE CERTIFIED ESSENTIALS RPA". The left sidebar shows a navigation tree with "Agreement E-signatures" and "Q&A Exam - Assessment". A progress bar indicates "PROGRESS 60% Complete". The central pane displays a question: "Which feature in Automation 360 can you use to securely store and pass sensitive information such as passwords and account numbers while building bot?". Below the question are four options: "Global Values", "My Bots", "Credentials" (which is selected), and "Historical". A "Next Question" button is at the bottom right. On the right side of the screen, there is a sidebar with user profiles: "Angela Josue Dager Yagual" (blue circle), "Sebastian Anthony C..." (green circle), "Pamela Kerly Cajama..." (orange circle), and "DQ" (grey circle). The status bar at the bottom right shows "ESP LAA" and the date "19/1/2024".

Which of the following are features of the AI Sense Recorder? (Choose two.)

The screenshot shows the same Windows desktop environment and application interface as the previous one. The taskbar and sidebar are identical. The central pane now displays a question: "Which of the following are features of the AI Sense Recorder? (Choose two.)". Below the question are five options, each with a checkbox. The checked options are: "AI Sense is suitable when object-based automation fails or is not efficient for automating tasks on applications that are accessed remotely, e.g. in a Citrix environment." and "AI Sense uses computer vision to intelligently links objects by determining their application structure to deliver change-resilient automation.". The other three options are not checked: "AI Sense automatically identifies controls that Universal Recorder is unable to detect.", "AI Sense Recorder should always be used in conjunction with the Universal Recorder.", and "AI Sense is not suitable for applications in automation scope running in a Citrix environment.". A "Next Question" button is at the bottom right. The sidebar on the right and the status bar at the bottom right are also present.

Which of the following variable type stores a single row values extracted from a table?

A screenshot of a Windows desktop showing a Microsoft Edge browser window. The title bar says "AUTOMATION ANYWHERE CERTIFIED ESSENTIALS RPA". The main content area displays a question: "Which of the following variable type stores a single row values extracted from a table?". Below the question are four options: Record (selected), Number, Dictionary, and Table. At the bottom of the question area is a red "Next Question" button. To the right of the question is a sidebar titled "Record variable type" with a detailed explanation and a link to Stack Overflow. Below the sidebar are two links: "What is a Dictionary variable type?" and "Can you give me an example of Record in Java?". The bottom right of the sidebar shows a progress bar at 1 de 30. On the far right of the screen, there's a vertical column with user profiles: Angelo Josue Dager Yagual (blue circle, SG), Sebastian Anthony Cevalos (green circle, PP), Pamela Kerty Cajamarca (yellow circle, DQ), and a placeholder for a profile picture (grey circle). The taskbar at the bottom shows various pinned icons and the date/time as 19/1/2024.

Which loop iterator should you select for Reading each record from database table?

A screenshot of a Windows desktop showing a Microsoft Edge browser window. The title bar says "AUTOMATION ANYWHERE CERTIFIED ESSENTIALS RPA". The main content area displays a question: "Which Loop Iterator should you select for reading each record from database table?". Below the question are four options: "For each row in a SQL query dataset" (selected), "For n times", "For each row in data table", and "For each row in CSV/TXT". At the bottom of the question area is a red "See Results" button. To the right of the question is a sidebar titled "Record variable type" with a detailed explanation and a link to Stack Overflow. Below the sidebar are two links: "Select a record variable from the Assign" and "Click Save". The bottom right of the sidebar shows a progress bar at 2 de 30. On the far right of the screen, there's a vertical column with user profiles: Angelo Josue Dager Yagual (blue circle, SG), Sebastian Anthony Cevalos (green circle, PP), Pamela Kerty Cajamarca (yellow circle, DQ), and a placeholder for a profile picture (grey circle). The taskbar at the bottom shows various pinned icons and the date/time as 19/1/2024.

Which type of variables in Automation 360 return specific values about the device on which the bot executes?

The question asks: "What is the benefit of installing Bot Agent on Bot Runner machines? Choose two." It instructs the user to "Select all that apply, and then click Submit." There are four options:

- Enables bot execution on local devices from the Control Room
- Enables Machine Learning capabilities on local devices
- Enables software updates without upgrading the entire system
- Establishes device connection with Control Room automatically, every time the Control Room restarts

A hand icon with a question mark is shown above a green "That's correct." message. A "Continue" button is visible.

In automation 360, which view provides both the flowchart format and code format to help RPA developers and business users to work together?

The screenshot shows a SCORM-based e-learning module titled "WHAT'S DIFFERENT IN AUTOMATION 360". The main content area displays a question: "In Automation 360, which view provides both the flowchart format and code format to help RPA developers and Business users to work together? Select the correct answer, and then click Submit." Below the question are four options: "Flow view", "List view", "Editor view", and "Dual view". The "Dual view" option is highlighted with a green border and a checkmark icon. To the right of the options is a hand icon holding a smartphone with a question mark above it. A green banner at the bottom of the screen says "That's correct." with a checkmark icon. A "Continue" button is also visible. On the left side, there is a navigation menu with items like "Overview", "Architectural Differences Between Enterprise 11 and Automation 360", "Feature Differences Between Enterprise 11 and Automation 360", "Check Your Understanding" (which is expanded to show "Question 1", "Question 2", "Question 3"), "Functional Differences Between Enterprise 11 and Automation 360", "Security Features in Enterprise 11 and Automation 360", and "Summary". The bottom of the screen shows a Windows taskbar with various icons and system status information.

In Automation 360, which of the following actions allow you to group logically related steps/actions together in the bot?

Which of the following are features of the AI sense recorder?

58:46

Which of the following are features of the AI Sense Recorder? (Choose two.)

AI Sense is suitable when object-based automation fails or is not efficient for automating tasks on applications that are accessed remotely, e.g. in a Citrix environment.

AI Sense is not suitable for applications in automation scope running in a Citrix environment

AI Sense uses computer vision to intelligently links objects by determining their application structure to deliver change-resilient automation.

AI Sense automatically identifies controls that Universal Recorder is unable to detect.

AI Sense Recorder should always be used in conjunction with the Universal Recorder.
